Reference I: STATUS 2000 Database Information

Overview

STATUS 2000 is a database, created in *Lotus Notes release 4.5.2*, which serves as a central collection point of information on HUD systems that are in the process of being made Year 2000 compliant. In this capacity, it is a tracking resource to chart each system's progress towards compliance, a repository of supporting documentation on the process, and a hub for the exchange of communication between all who are involved with the conversion of these systems.

How Do I Access STATUS 2000?

If you are involved in the Year 2000 conversion effort for a system, but do not have access to STATUS 2000 on your workstation, contact Team 2000 via the Team 2000 cc:Mail mailbox at Team_2000@hud.gov.

If STATUS 2000 has been loaded onto your workstation, simply click on the Lotus NOTES icon on your desktop, and then on the STATUS 2000 button, once the NOTES screen has come up. A personal account and password log-in should already be established. All you need do is enter your password, click OK, and the application will open.

How Do I Use STATUS 2000?

A on-line user's guide is built-in to the application. To access it, go to the pull down menu for Help and select "Using this Database."

A link to "Using this Database" will be established when this document has been posted on the HUDWeb.

This page has been left blank intentionally.
